LOCATION
Riyadh, Saudi Arabia

EDUCATION

MSc, Advanced Computer Science
The University of Manchester, UK · 2007 – 2008

BSc, Computer Science
Prince Sultan University · 2000 – 2005

CORE EXPERTISE

- Technology strategy
- Enterprise architecture
- Digital platforms
- Streaming platforms
- AI & automation
- Cloud & infrastructure
- Platform reliability
- In-house engineering
- Vendor management
- Agile delivery

INDUSTRIES

- Telecom
- Entertainment & streaming
- Government

Sultan Alsubaie

General Manager, Entertainment Technology · stc

EXECUTIVE PROFILE

I am a technology executive with more than 20 years of experience spanning software engineering, enterprise architecture, digital platforms, technology strategy and organizational leadership.

I currently lead Entertainment Technology at stc, with responsibility across engineering, architecture, infrastructure, operations, platform reliability and technology delivery for stc tv and entertainment platforms.

My experience has given me a perspective from both sides of technology leadership. I started by building systems myself, then moved through business analysis, digital channels, technology demand management and enterprise applications before taking broader technology leadership responsibilities.

A recurring theme throughout my career has been building sustainable internal capability. I have established in-house engineering teams, transitioned strategic platforms away from vendor dependency, modernized technology estates and introduced AI and automation to improve efficiency and operational performance.

I focus on the decisions that matter most at technology leadership level: where to build versus buy, how architecture supports business growth, how to develop strong engineering organizations, and how technology investment translates into customer and business value.

SCOPE OF LEADERSHIP

01 **Technology Strategy**
Turning business priorities into technology roadmaps, investment decisions and executable transformation programs.

02 **Engineering & Digital Platforms**
Building teams and platforms capable of supporting high-volume, customer-facing digital services.

03 **Architecture & Modernization**
Modernizing applications, integrations, infrastructure and platform architecture while managing long-term technology sustainability.

04 **AI & Automation**
Applying AI and automation where they create measurable improvements in engineering, operations, support and customer experience.

05 **Build vs. Buy**
Making deliberate decisions on what should remain strategic internal capability and where external platforms or partners create better value.

06 **Technology Operations & Reliability**
Designing for availability, scalability, service continuity and operational readiness rather than treating operations as an afterthought.

07 **Technology Investment & Vendors**
Managing major technology investments, strategic suppliers and vendor performance against business outcomes.

08 **Organization & Talent**
Building high-performing internal teams, developing Saudi technical capability and creating long-term organizational ownership.

EXPERIENCE

General Manager, Entertainment Technology — Nov 2025 – present
stc

- Defining and executing the technology strategy for entertainment and digital platforms.
- Modernizing applications, cloud and on-premises infrastructure, integrations and streaming platforms.
- Driving scale, performance and reliability on high-volume platforms, including a major platform migration.
- Leading AI and automation adoption across engineering, operations, support and customer-facing features.
- Building in-house engineering capability for long-term platform ownership.

HOW I LEAD

Business before technology
Every technology decision should start with the business problem, the customer need or the strategic objective it serves, never with the tool or the vendor.

Build where ownership matters
Not everything should be built in-house, but capabilities that differentiate the business or create strategic dependency deserve ownership.

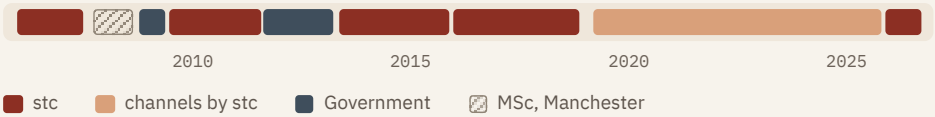

Architecture is a business decision
Architecture determines cost, speed, resilience and future flexibility. It is a leadership decision, not simply a technical one.

Build teams that run without you
Strong technology organizations depend on capable leaders and engineers who own their decisions, not on permanent escalation to one individual.

Stay close to the technology
Technical depth still matters at the leadership table. It is what lets me challenge architecture, evaluate platforms and weigh investment decisions.

Simplify before you scale
Every system, vendor and integration carries a long-term cost. Retiring what no longer adds value matters as much as building what's next.

CAREER AT A GLANCE

EXPERIENCE, CONTINUED

General Manager, Business Applications
Mar 2019 – Nov 2025

channels by stc

Technology strategy and delivery for stc's sales applications.

- Built and led an in-house development team, reducing reliance on external vendors.
- Migrated critical enterprise solutions from vendor-managed to in-house platforms: significant cost savings and faster deployment.
- Designed AI-powered process automation that cut operational workload.
- Managed multi-million SAR technology budgets.

Director, Consumer Demand Management
Dec 2015 – Dec 2018

stc

The primary IT interface for every project from stc's Consumer sector, guiding strategy, architecture and delivery of large transformation programs.

- Directed enterprise solution blueprints aligned with business goals and architecture standards.
- Helped set IT vision and strategy for stc's long-term transformation.
- Led the adoption of Agile delivery.

Section Manager, eServices Demand Management
May 2013 – Dec 2015

stc

Customer-facing digital channels: the stc portal, the mystc portal and app, and the internal portal.

- Led cross-functional teams across multiple digital channels.
- Kept platforms stable, secure and scalable for millions of users.
- Introduced continuous improvement to speed up releases and reduce downtime.

Earlier career
Dec 2005 – Apr 2013

Project Manager, Ministry of Foreign Affairs — Aug 2011 – Apr 2013
Senior Business Analyst, stc — Jun 2009 – Aug 2011
Senior Business Analyst, Ministry of Education — Oct 2008 – Jun 2009
Programmer, stc — Dec 2005 – Jul 2007

Delivered government e-services and in-house applications that replaced manual processes, integrated enterprise applications with core telecom network elements, led RFPs and vendor evaluation, and developed billing mediation systems for GSM and fixed-line services on UNIX.
